ANALYTIKA®, spol. s r.o.

ANALYTIKA®, spol. s r.o. is a Czech company with more than 25 years of experience in manufacturing of calibration standard solutions. We offer Certified Reference Materials, QC standards, reagents and other laboratory solutions.

Nowadays ANALYTIKA®, spol. s r.o. is the main supplier of calibration standard solutions product for control and quality assurance in Czech laboratories, nevertheless the major part of our production is delivered to foreign countries.

In 2015, the Department of Reference Materials acquired the Certificate of accreditation for reference materials producers in accordance with ČSN EN ISO/IEC 17025:2005 and TNI ISO Guide 34:2013.

Our main goal is providing our customers with high quality products, reasonable prices and fast service.

QUALITY MANAGEMENT

ANALYTIKA®, spol. s r.o.

is certified according to ISO 9001:2008.

Competence of Reference Material producer

Reference Materials including Certified Reference Materials are manufactured in accordance with requirements of ISO Guide 30 - 35 by Department of Reference Materials accredited according to ČSN EN ISO/IEC 17025:2005 and TNI ISO Guide 34:2013.

Quality control

Testing and calibration needed in the manufacturing process of Reference Materials are conducted in accordance with ISO 17025 in our testing laboratory accredited by Czech Accreditation Institute according to ČSN EN ISO/IEC 17025:2005.

ORDERING AND SUPPORT

It would be our pleasure to respond to your inquiries, receive and process your orders and offer the support you deserve. You can contact our qualified sales representatives or place your order by email or fax.

DOCUMENTATION

All of our products are delivered with documentation including all information necessary for their proper use and fulfills the requirements of corresponding ISO documents and current legislation.

Documentation of a product usually consists of a Certificate or an Identification Sheet, an appendix to the Certificate or the Identification Sheet and a Safety Data Sheet.

CRM DOCUMENTATION

CRM CERTIFICATE

The CRM Certificate is issued for certified calibration solutions (for ICP, ICP-MS, AAS, AES, IC), buffers and conductivity standards. The Certificate is established in a compliance with ISO Guide 31.

The Certificate contains, as well as other aspects:

- » Primary substance and its purity
- » Certified concentration value and its uncertainty in mg/l
- » The density of the solution and its uncertainty in mg/kg
- » Means of certification and realization of metrological traceability
- » Experimentally detected trace impurities

RM DOCUMENTATION

IDENTIFICATION SHEET FOR RM MANUFACTURED WITHIN THE SCOPE OF ACCREDITATION

The Identification Sheet is issued for calibration solutions (for ICP, ICP-MS, AAS, AES, IC), buffers and conductivity standards. The Identification Sheet is formulated in accordance with ISO Guide 31. It includes characteristics of the product and its traceability to certified reference materials ASTASOL®.

IDENTIFICATION SHEET FOR RM MANUFACTURED OUT OF SCOPE OF ACCREDITATION

The Identification Sheet is issued for adjustment solutions, tuning solutions ICP, ICP-MS and chromatography standards. The Identification Sheet is formulated in accordance with ISO Guide 31.

ANNEX TO THE CRM CERTIFICATE AND RM IDENTIFICATION SHEET

The annex to the CRM Certificate and the Identification Sheet includes information about preparation, usage and storing aqueous calibration solutions manufactured within the scope of accreditation.

FURTHER DOCUMENTATION

DECLARATION OF QUALITY

A Declaration of Quality goes with the auxiliary solutions.

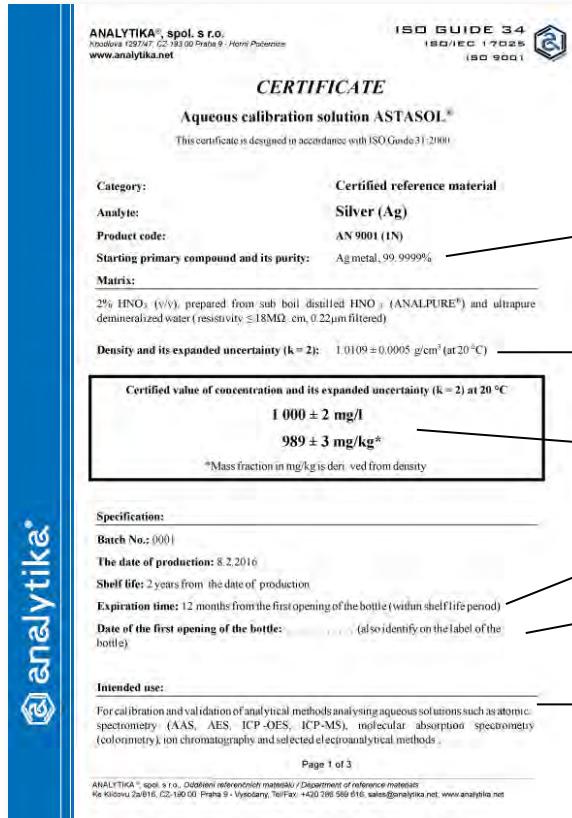

PROTOCOL OF ANALYSIS

A protocol of analysis is issued for acids and reagents.

SAFETY DATA SHEET

Products classified as hazardous are distributed with a Safety Data Sheet compiled in compliance with the applicable legislations. It is accessible publicly or available upon request.

AN EXAMPLE OF A CRM CERTIFICATE FOR A SILVER CALIBRATION SOLUTION

**Traceable to SI units****Starting material and its purity****Density****Certified value and uncertainty****Life time****Bottle opening date****Intended use****Certification and traceability:**

This CRM is certified on the basis of gravimetric preparation. This procedure also ensures a direct traceability to SI unit - kg. Certified concentration, its uncertainty and traceability were verified by gravimetric determination of silver (as AgCl) and by simultaneous determination of silver in independent reference solution (SRM NIST 3151).

Trace impurities in bottled solution (in mg/l):

Determination of trace impurities was performed by AAS, ICP-OES and ICP-MS. Impurity levels are supplied only for information of the user and should not be used as calibration data.

Homogeneity and stability:

It has been demonstrated that this CRM is homogeneous and its stability is guaranteed during the whole shelf-life provided the solution is kept under conditions presented below.

Storing and instruction for use:

This CRM has to be stored in the original closed bottle between 5°C and 30°C . The producer guarantees a declared shelf life and expiration time provided the CRM is properly stored and professionally handled. The temperature of the solution must be $20 \pm 0.5^\circ\text{C}$ before every use. After use, the bottle has to be immediately tightly capped and the screw cap sealed with paraffin. It is necessary to record the first opening of the bottle. From this date, the expiration time starts. It is extremely important to cover the screw cap and the neck of the bottle with a paraffin layer after each opening to prevent vapour phase losses.

CUSTOM STANDARDS

Have you not choosen from our basic offer? Ask for preparation of solutions according to your requirements!!!

Our personnel, having wide and long-term experience with development and production not only calibration solutions, are ready to use their experience for creating products which will meet your needs and requirements.

CUSTOM-MADE REFERENCE MATERIALS

- » RM for ICP, ICP-MS, AAS, IC ...
- » Tuning solutions and internal standards for ICP, ICP-MS
- » RM for chromatography
- » Matrix RM
- » Samples for interlaboratory comparisons (PT schemes)

WHAT DO WE NEED TO KNOW?

- » Category (RM/CRM, adjustment solution etc.)
- » Analyte(s) and their concentration
- » Type of the solution matrix
- » Required volume of the solution and the required packaging
- » Delivery time

HOW TO ORDER

You can contact our sales department with your requirements by phone, email or fax. Our sales representatives will take care of any enquiries you may have.

PACKAGING MATERIALS

Our products are delivered in various types of containers. When choosing the material of the container, we emphasize quality and take into account intended usage of the product. We opt for containers which enable easy and safe handling and, most importantly, meet the safety regulations for transportation of hazardous materials.

Prior to filling, the bottles and caps are leached with diluted acids, washed repeatedly with deionised water and then thoroughly dried.

Amber or transparent HDPE bottles, amber or transparent borosilicate bottles and LDPE, PP, PS bottles are used for packing most often.

VOLUME

Our products are available in a wide range of volumes, from 25 ml to 1,000 ml as a standard, in the case of customs solutions the volume can be even bigger. Volumes offered are always specified at the beginning of each chapter or particular product.

HOW TO ORDER

You can order all of our products via email, fax, and mail. Just indicate the product code, required volume and the number of units. Our sales representatives will send you the confirmation of your order immediately.

If any advice is needed, please specify your requirements and our personnel will get in touch and offer a right solution.

How to create Order number?

Product code	Volume in ml
AN90011N	100
Order number

TRANSPORT

Most of our products are classified as hazardous and thus it is necessary to follow strictly the transport rules. In a case that the transport needs special conditions, the transport requirements are indicated in the documentation of specific products.

STORAGE

The products need to be stored in their original packing under the conditions given by the producer. The producer guarantees a given period of validity / shelf life provided only if the materials are handled properly. Specific conditions such as how to store and handle a particular product are stated in its documentation.

The life time (shelf life) is the period when CRM and RM keep their certified or assigned values within the rank of associated uncertainties.

The expiration time (period of validity) is the time during which the producer guarantees the stability of CRM and RM from their opening (within a life time of RM) and is stated as a specific date.

TERMS OF USE

ANALYTIKA®, spol. s r.o. products are intended for laboratory use only. They are not intended for production of remedies, food or domestic usage. Only qualified personnel are allowed to handle this products.

The responsibility for the safe handling and use of these products rests solely with the buyer or user.

CERTIFIED REFERENCE MATERIALS

Single element standards ASTASOL®

- » For calibration and validation of analytical methods analysing aqueous solutions such as atomic spectrometry (AAS, AES, ICP-OES, ICP-MS), molecular absorption spectrometry (colorimetry) and selected electroanalytical methods
- » Manufactured under ISO Guide 34 and ISO 17 025
- » Available in concentrations 10 mg/l, 100 mg/l, 1,000 mg/l and 10,000 mg/l
- » Directly traceable to SI units
- » Controlled with primary or instrumental analytical methods and independent standards (e.g. NIST SRM)
- » Prepared from high purity starting material, sub boil distilled acids and ultrapure demineralized water (resistivity ~ 18MΩ.cm)
- » Delivered in amber HDPE or glass laboratory grade bottles
- » Expiration time 12 months, wherever possible
- » Supplied with the Certificate designed in accordance with ISO Guide 31
- » Available in volumes 30 ml, 50 ml, 100 ml, 250 ml and 500 ml

Single element standards ASTASOL®

- » Economical solution for routine calibration of analytical methods analysing aqueous solutions such as atomic spectrometry (AAS,AES, ICP-OES, ICP-MS), molecular absorption spectrometry (colorimetry) and selected electroanalytical methods
- » Manufactured under ISO Guide 34 and ISO 17 025
- » Traceable to corresponding CRM ASTASOL®
- » Available in concentrations 1,000 mg/l and 10,000 mg/l
- » Prepared from high purity starting material, sub boil distilled acids and ultrapure demineralized water (resistivity ~ 18MΩ.cm)
- » Delivered in amber HDPE or glass laboratory grade bottles
- » Expiration time 18 months, wherever possible
- » Supplied with the Identification sheet designed in accordance with ISO Guide 31
- » Available in volumes 100 ml, 250 ml and 500 ml

REFERENCE MATERIALS OF PHYSICAL PROPERTIES

Certified reference materials pHanatTM- calibration buffers for pH measurement

- » For calibration of pH measurement and validation of analytical methods determining pH
- » Manufactured under ISO Guide 34 and ISO 17 025
- » Traceable to NIST SRM and thus to international pH scale IUPAC
- » Prepared from high purity starting material and ultrapure demineralized water (resistivity ~ 18 MΩ.cm)
- » Temperature dependance data in the Certificate
- » Delivered in transparent HDPE laboratory grade bottles
- » Expiration time 12 months
- » Supplied with the Certificate designed in accordance with ISO Guide 31
- » Available in volumes 100 ml, 250 ml and 500 ml

HIGH AND ULTRA-HIGH PURITY MINERAL ACIDS AND OTHER REAGENTS

ANALPURE® ULTRA reagents

- » Extremely low trace metal impurities, in most cases less than 10 ppt
- » Ultra-pure acids are intended for use in semiconductor, nuclear, clinical, pharmaceutical, geochemical analysis, and wherever the highest purity acids are required
- » Ultra-pure acids filled in fluoropolymere bottles
- » Supplied with a Protocol of Analysis with specification for over 60 analytes
